Foreword

The Fourth European Conference on Ecological Modelling (ECEM) and the Fourth International Workshop on Environmental Applications of Machine Learning (EAML) were organized jointly in Bled, Slovenia, during the week of September 27 - October 1, 2004. The aim of these events was to bring together researchers from the areas of ecology, ecological modelling and environmental sciences, on one hand, and the areas of data analysis, data mining and machine learning, on the other. In many respects, they were treated as a single event, namely ECEM/EAML 2004.

As environmental concerns grow and information technology develops, more and more data on the different aspects (physical, chemical, biological, ecological) of the environment are gathered. There is an increasing need to analyse the collected environmental data for different purposes, which include the support for environmental management decisions. The International Workshop on Environmental Applications of Machine Learning provided a forum for presenting recent advances in applying machine learning and data mining techniques for the analysis of environmental data.

Ecological modelling is concerned with the development and use of mathematical, computer and simulation models of ecosystems. It is a relatively young scientific discipline, which is rapidly gaining importance, especially because of the use and usefulness of ecological models for the management of natural resources. The European Conference on Ecological Modelling is the premiere European scientific event in the area of ecological modelling and regularly attracts an international audience.

ECEM 2004 covered all topics in the area of ecological modelling. An indicative, but non-exhaustive list of topics is given below:

- Ecological modelling techniques, e.g., artificial intelligence approaches, individual based modelling, machine learning, network analysis, neural networks, qualitative modelling and reasoning, structural dynamic modelling, standard models;
- Modelling for ecosystem management, e.g., wildlife management, ecosystem based management, sustainability, managing renewable natural resources, niche reconstruction;
- Modelling growth and development processes in ecosystems, e.g., modelling biodiversity changes, population dynamics, habitat modelling, ecological energetics;
- Modelling different types of ecosystems, e.g., forest ecosystems (alpine/boreal forests; temperate broadleaved forests; Mediterranean forests), aquatic ecosystems (marine; freshwater - lakes, rivers; lagoons; estuaries), grassland ecosystems, agricultural ecosystems;

- Modelling catastrophic changes in the environment, e.g., modelling the spread of invasive species, ecotoxicology (organism, population, community, ecosystem), outbreaks (pests, wildfires, floods, droughts).

A total of 110 abstracts were submitted and 90 were accepted after a review process. Each submitted abstract was sent to three members of the Program Committee for review. The Program Committee members themselves did the majority of reviews, assisted by a few additional reviewers appointed by the Committee members. Authors of accepted abstracts (for oral or poster presentation) were invited to submit full versions of their papers. These were reviewed separately by the members of the Program Committee and other reviewers for inclusion in a special issue of the journal *Ecological Modelling* which was to be published after the conference.

The program of ECEM 2004 consisted of three invited talks by Broder Breckling (University of Bremen, Germany), Bai-Lian Li (University of California Riverside, USA), and Jacqueline McGlade (European Environment Agency), as well as oral and poster presentations of accepted contributions.

Many people contributed in various ways to the ECEM 2004 conference. We would especially like to thank:

- The authors of submitted contributions who made the conference possible by presenting their work;
- The three invited speakers: Broder Breckling, Bai-Lian Li, and Jacqueline McGlade;
- The Advisory Committee for their suggestions regarding the Program Committee, invited speakers and encouraging remarks;
- The members of the Program Committee for their efforts in evaluating the submitted abstracts and papers;
- The members of the Organizing Committee;
- The sponsors for their generous support;
- The management and staff of the Albatros Congress Turist Agency, Bled, and the Center for Knowledge Transfer in Information Technologies, Jožef Stefan Institute, Ljubljana for their support;
- The Jožef Stefan Institute for providing the organizational infrastructure.

Contents

Foreword	iii
Acknowledgements	xi
Conference Chairs	xi
Organizing Committee	xi
International Advisory Committee	xi
Program Committee	xii
Organizational Support	xii
Invited Talks	1
Individual-based models as tools for ecological theory and application. Understanding the emergence of organisational properties in ecological systems <i>Broder Breckling (joint work with Ulrike Middelhoff)</i>	3
Modelling ecological complexity: Challenges and opportunities <i>Bai-Lian Li</i>	5
Spatial assessments of Europe's environment <i>Jacqueline McGlade</i>	7
Contributed Abstracts	9
Assessing NEP of an even-aged forest with Mathematica <i>Alexandrov, G. A., and Yamagata, Y.</i>	11
Secondary extinctions in ecological networks: Bottlenecks unveiled <i>Allesina, S., Bodini, A., and Bondavalli, C.</i>	13
A water quality model as tool for the evaluation of the limiting nutrient <i>Artioli, Y., Albrigi, E., and Palmeri, L.</i>	15
Building a domain library for knowledge based approach to automated modeling of lakes <i>Atanasova, N., Todorovski, L., Džeroski, S., and Kompare, B.</i>	17
Modelling optimization of solar salt production using emergy approach <i>Babič, J., and Debeljak, M.</i>	19

A system dynamics model for the management of the gooseneck barnacle (<i>Pollicipes pollicipes</i>) in the marine reserve of Gaztelugatxe (Northern Spain)	
<i>Bald, J., Borja, A., and Muxika, I.</i>	21
Understanding ecosystem dynamics by using self organizing map	
<i>Bandelj, V., Cossarini, G., Fonda Umani, S., and Solidoro, C.</i>	23
Uncertainties in regional modelling of climate change impact in future: An example of thrips <i>tabaci lindeman</i> in Slovenia	
<i>Bergant, K., Kajfež-Bogataj, L., and Trdan, S.</i>	25
Modelling the damage status of silver fir trees (<i>Abies alba</i> Mill.) on the basis of ecological and stand factors	
<i>Božić, M., Antonić, O., Pernar, R., Jelaska, S. D., Križan, J., Čavlović, J., and Kušan, V.</i>	27
Indirect effects and distributed control in ecosystems: 3. Temporal variation of indirect effects in a nitrogen flow model of the Neuse river estuary, USA: Time series analysis	
<i>Borrett, S. R., Whipple, S. J., and Patten, B. C.</i>	29
Applicability of LOICZ derived indexes in complex ecosystem. A multibox analysis for the lagoon of Venice.	
<i>Canu, D. M., Cossarini, G., and Solidoro, C.</i>	31
On modelling a microcolonial black fungi growth on rock surfaces	
<i>Chertov, O., Gorbushina, A., Deventer, B.</i>	33
The use of forest ecosystem model EFIMOD for research and practical implementation at forest stand local and regional levels	
<i>Chertov, O., Komarov, A., Loukianov, A., Mikhailov, A., Nadporozhskaya, M., and Zubkova, E.</i>	35
MOOVES: An individual-based model to study the functioning of a tropical ecosystem and its reaction to fishing pressure	
<i>Colomb, A., Le Fur, J., and Gascuel, D.</i>	37
Using data assimilation for investigating the spatial and temporal variability of the trophic state in the Venice lagoon.	
<i>Cossarini, G., Lermusiaux, P., and Solidoro, C.</i>	39
Modelling of weather variability effect on fitophenology	
<i>Črepinšek, Z., Kajfež-Bogataj, L., and Bergant, K.</i>	41
Modelling ecological absence-presence data along an environmental gradient	
<i>Damgaard, C.</i>	43
Using matrix population models to assess environmental risks of transgene escape via feral oilseed rape	
<i>Garnier, A., Deville, A., and Lecomte, J.</i>	45
Indirect effects and distributed control in ecosystems: 2. Environ analysis of a seven-compartment model of nitrogen flow in the Neuse river estuary, USA: The static case	
<i>Gattie, D. K., Schramski, J. R., Borrett, S. R., Patten, B. C., and Turk, H. J.</i>	47
A domain-specific language for landscape modelling: The Brittany agricultural mosaic as a case study	
<i>Gaucherel, C., Pichancourt, J. B., Viaud, V., Burel, F., and Baudry, J.</i>	49

Modelling mixotrophy	
<i>Hammer, A., and Pitchford, J. W.</i>	51
The dashboard analysis of sustainable development: Data problems and policy options	
<i>Hardi, P., Muyatwa, P., and Sarma, S. K.</i>	53
Asking the monkey about the organ grinder: What monitoring predators reveals about prey availability in a model ecosystem	
<i>Hill, S., Murphy, E., Reid, K., and Trathan, P.</i>	55
Interactions between environmental noise and immigration rate control patterns of species diversity	
<i>Hiltunen, T., Laakso, J., and Kaitala, V.</i>	57
Modelling basic physical parameters in Adriatic sea as the basis for marine habitats mapping	
<i>Janeković, I., Antonić, O., Križan, J., Bukovec, D., and Bakran-Petricioli, T.</i>	59
Carrying capacity for aquaculture in the Velebit Channel (Adriatic Sea)	
<i>Janeković, I., Skakelj, N., and Legović, T.</i>	61
Responses of forest herbs to available understory light measured with hemispherical photographs in silver fir – beech forest in Croatia	
<i>Jelaska, S. D., Antonić, O., Kušan, V., Križan, J., and Božić, M.</i>	63
Spatial forest plan development in the presence of northern spotted owls	
<i>Johnson, D. L., Bettinger, P., and Johnson, K. N.</i>	65
Simulating the implications of alternative policies for a large forested landscape	
<i>Johnson, K. N., Spies, T. A., Bettinger, P., and Reeves, G. H.</i>	67
Modeling two spruce bark beetle populations (Scolytidae: <i>Ips typographus</i> , <i>Pityogenes chalcographus</i>) in southwestern Slovenia: A tool in the management of economically important species	
<i>Jurc, M., Perko, M., Džeroski, S., Demšar, D., and Hrašovec, B.</i>	69
The cellular automata model of two-species plant community with spatial interaction between species	
<i>Komarov, A. S.</i>	71
Modelling and evaluating climate-change-caused changes of land use in north-west Germany	
<i>Kraft, D.</i>	73
Achieving sustainability of waste management in Southampton (UK): A case study within the framework of industrial ecology	
<i>Krivtsov, V., and Dacombe, P.</i>	75
Investigating indirect effects in aquatic ecosystems: A case study and the implications for hindcasting the past and predicting the future environmental dynamics	
<i>Krivtsov, V., Jones, S. E., and Jago, C. F.</i>	77
Population dynamic consequences of adaptive growth rate in fluctuating environment	
<i>Laakso, J., Kaitala, V., and Ranta, E.</i>	79
Krk submarine outfall: Prediction of effects on a marine ecosystem	
<i>Legović, T., and Janeković, I.</i>	81

Significance of landscape structure on moose population management <i>Luoma, A., Ranta, E., and Kaitala, V.</i>	83
Modelling opportunistic macroalgae productivity and biomass in a shallow eutrophic estuary; The role of macroalgal zoospores <i>Martins, I., Lopes, R., Ferreira, J. G., and Marques, J. C.</i>	85
Modelling post fire succession in a Mediterranean forest: Implications from a Markovian approach <i>Matossian, D., and Matsinos, Y. G.</i>	87
A simulation study for population viability of sea turtles; the role of nest census data for population trends <i>Matsinos, Y. G., and Mazaris, A. D.</i>	89
Investigating the effect of temporal variation at reproductive performance of green sea turtles (<i>Chelonia mydas</i>) by using an individual based model <i>Mazaris, A. D., and Matsinos, Y. G.</i>	91
Analysis of the transferability of a simple lake model to lakes of different trophic state <i>Mieleitner, J., and Reichert, P.</i>	93
Simulation modelling of forest ecosystem development under the different forest management scenarios <i>Mikhailov, A. V., Komarov, A. S., and Chertov, O.</i>	95
Application of cellular automata modeling for plants invasion model <i>Mikhailova, N. V., Komarov, A. S., and Mikhailov, A. V.</i>	97
Isolated population dynamics with periodic disturbances <i>Nedorezov, L. V., and Sadykov, A. M.</i>	99
Model abstraction techniques: An overview of applications in agricultural contaminant hydrology <i>Pachepsky, Y., van Genuchten, M. T., Guber, A. K., Jacques, D., Simunek, J., Schaap, M., Nicholas, T. J., and Cady, R.</i>	101
Indirect effects and distributed control in ecosystems: 1. Environs and network environ analysis: Introduction and overview <i>Patten, B. C., Bata, S., Borrett, S. R., Fath, B. D., Gattie, D. K., Schramski, J. R., Turk, H. J., and Whipple, S. J.</i>	103
Indirect effects and distributed control in ecosystems: 6. Distributed control in the environ networks of a seven-compartment model of nitrogen flow in the Neuse river estuary; USA: Time series analysis <i>Patten, B. C., Schramski, J. R., Gattie, D. K., Turk, H. J., Whipple, S. J., Borrett, S. R., and Fath, B. D.</i>	105
Qualitative models about stream ecosystem recovery: an exploratory study <i>Salles, P., Bredeweg, B., and Araujo, S.</i>	107
The ants' garden: Qualitative models of complex interactions between populations <i>Salles, P., Bredeweg, B., and Bensusan, N.</i>	109
Highlighting model code selection and application process in policy-relevant water quality modelling: Lake Vansjø case story as an example <i>Saloranta, T. M.</i>	111

Indirect effects and distributed control in ecosystems: 5. Distributed control in the environ networks of a seven-compartment model of nitrogen flow in the Neuse river estuary; USA: Static analysis <i>Schramski, J. R., Gattie, D. K., Patten, B. C., Whipple, S. J., Turk, H. J., Borrett, S. R., and Fath, B. D.</i>	113
Modeling fish migration path in a river based on its environmental preference <i>Sekine, M., Watanabe, M., Ukita, M., Imai, T., and Higuchi, T.</i>	115
A simple assessment model for precautionary pre-selection of environmental chemicals with respect to global cold condensation <i>Smieszek, T., Peter, P., and Müller-Herold, U.</i>	117
Chaos in natural and mathematic systems <i>Svirezhev, Y.</i>	119
Knowledge-based framework for modeling dynamic environmental systems <i>Todorovski, L., and Džeroski, S.</i>	121
Large global carbon dioxide model for different landscapes <i>Torrens, F.</i>	123
Modelling matter, exergy and emergy flows through ecological and economic systems, within a "zero emission" framework <i>Ulgiati, S.</i>	125
Indirect effects and distributed control in ecosystems: 4. Comparative environ analysis of a seven-compartment model of nitrogen flow in the Neuse river estuary: Time series analysis <i>Whipple, S. J., Borrett, S. R., and Patten, B. C.</i>	127
Integrating the fuzzy analytic hierarchy process with dynamic programming approach for determining the optimal forest management decisions <i>Zadnik-Stirn, L.</i>	129
Model of influence of reservoir shape on processes of self-cleaning <i>Zakirov, A. G., and Frolova, L. L.</i>	131
PA/SA for a LILW repository in Slovenia - Modeling of influence <i>Železnik, N., Mele, I., and Petkovšek, B.</i>	133
